SUMMARY

I am a passionate Computer Science student with strong skills in Machine Learning and AI, eager to innovate data-driven solutions. I aim to leverage advanced technologies to solve real-world problems and deliver impactful insights through intelligent systems and web applications.

SKILLS

Programming Languages Python, SQL, C, HTML, CSS

Data Tools Numpy, Pandas, Matplotlib, Scikit-Learn

AI & Concepts Artificial Intelligence, Machine Learning, Deep Learning, Data Analysis

DATA ANALYTICS CERTIFICATION

Data Analytics Certification, Visvesvaraya Technological University May '26

Python Essentials And Libraries For Data Science, Visvesvaraya Technological University May '26

Complete Data Science, Machine Learning, DL, NLP Bootcamp, udemy Aug '25

ACHIEVEMENTS

MedImputeX

MedImputeX is a major project developed in the 8th semester that addresses the challenge of imputing missing data in medical datasets. The project was recognized with the **First Prize for the Best Project of Social Relevance**.

EDUCATION

Bachelor in Engineering in Computer Science and Engineering, Dayananda Sagar College of Engineering (GPA: 9) 2022 — Present
Bangalore, India

Pre university in PCMB, Expert PU College (GPA: 94%) 2020 — 2022
Mangalore, India

High School, Sri Ramakrishna Vivekananda Residential School (GPA: 96%) 2020
Sagar, Shivamogga, India

PROJECTS

MedImputeX - Medical Time-Series Data Imputation [Link](#) Aug '25 — Apr '26

- MedImputeX is a project of imputing missing values in the medical dataset, the project consists of 4 models BRITS, SAITS, GAIN and fusion network along with it is trained on a real data of patients of MIMIC IV from physionet
- Addressed the critical problem of missing data in real-world Electronic Health Records (EHR) datasets, which can bias clinical outcomes and ML model performance.
- Implemented and benchmarked three state-of-the-art imputation models: BRITS (Bidirectional RNN), SAITS (Self-Attention), and GAIN (GAN-based Imputation), each trained independently on medical time-series data.
- Designed a Fusion Network that intelligently combines outputs from the three models using learned weights, achieving lower MAE and RMSE than any single model baseline.

College Result Analysis & Visualization [Link](#) Aug '24 — Jan '25

- Analysed semester-wise student performance trends by combining SEE (Semester End Examination) scores and attendance records across multiple departments.
- Cleaned and preprocessed raw institutional data using Excel and Python (Pandas); identified key patterns such as attendance-performance correlation and subject-wise failure rates.
- Created interactive dashboards in Tableau to present insights to faculty stakeholders, enabling data-driven academic interventions.

Real Estate Price Prediction [Link](#) Sep '23 — Feb '24

- Built an end-to-end web application to predict residential property prices based on area, BHK configuration, number of bathrooms, and location.
- Performed feature engineering, outlier removal, and dimensionality reduction on a Bengaluru housing dataset; achieved strong prediction accuracy using Linear Regression.
- Deployed the Flask-based REST API, with an interactive HTML/CSS/JavaScript frontend for live predictions.
- secure and credible branding. Utilized advanced AI development tools for code generation and optimization

EXPERIENCE

Freelance Web Developer And AI Integrator

FREELANCER

Nov '25 — Apr '26

Bangalore, India

Advanterra: advanterra.in a professional web presence for a Bengaluru-based construction company.

- Dhanvith Fincare: Designed dhanvithfincare.com for a financial advisor LLP, ensuring
